

.....

**Here's why  
we'll make  
great  
partners  
for **your**  
business.**

.....

**Ireland has a new option for the safe, efficient and sustainable treatment of commercial and industrial waste. Waste-to-Energy, a real alternative to disposal, brings added choice to the Irish market.**

## **Indaver**

Indaver is one of Europe's leading waste management companies, providing high-quality, sustainable and cost-effective solutions. We have had a presence in Ireland for over thirty years and our commitment to the Irish market is a long-term one.

## **Meath**

Indaver's Meath Waste-to-Energy facility, located just off the M1 near Duleek, is the first of its kind in Ireland, designed and constructed to recover energy circa 200,000 tonnes of residual waste a year.

Meath Waste-to-Energy is helping Ireland to meet national and EU environmental obligations. It also helps meet renewable energy targets and improve energy security thereby improving the economy.

## **So what's in it for you?**

### **Safety and security**

The landfill solution just buries and hides, it never destroys. So it is not the most suitable form of waste disposal for many products and materials. Meath Waste-to-Energy ensures complete destruction.

Not only do we destroy your waste, we can provide documentation to prove this – or you can monitor this destruction personally if you wish.

### **Recovery - not disposal**

Because Meath Waste-to-Energy generates 18MW of electricity for export - enough to supply more than 20,000 homes – it is classified as 'recovery' rather than 'disposal', helping you to meet your corporate environmental targets. You will receive a certificate of recovery for all waste sent to Meath Waste-to-Energy.

### **Zero waste to landfill**

For the first time in Ireland it is possible to achieve 'Zero waste to landfill'. Meath Waste-to-Energy is the reason why.

### **Confidence**

With Indaver, you know where you stand. In a time of much speculation in the waste management industry, Meath Waste-to-Energy is reality. Here. Now.

## Indaver, leading the field in sustainable waste management.

### So what's in it for you? *continued...*

#### Continuity

Landfill facilities have restricted capacity for residual waste in order to meet national and EU environmental obligations. Meath Waste-to-Energy has an unrestricted residual waste capacity of circa 200,000 tonnes per annum securing capacity for our customers.

#### Customised response

Many customers require treatment for special types of waste – Meath Waste-to-Energy is able to respond to these requirements with a customised response and transparent reporting for each type.

#### Technology

There are already over 450 waste-to-energy plants operating in the EU converting millions of tonnes of waste into energy. With Meath Waste-to-Energy Ireland has now caught up.

#### Seals of approval

The Environmental Protection Agency (EPA), Meath County Council and An Bord Pleanála have fully-approved the Meath Waste-to-Energy facility.

#### Key benefits to industrial companies

- The secure destruction of waste during the incineration process
- Transparent and timely reporting
- Reduced carbon footprint and less waste sent to landfill
- A certificate of recovery issued within days of waste being received.
