**Here's why
we'll make
great
partners
for **your**
business.**

.....

Though Ireland is committed to recycling a large proportion of its waste, a certain amount of 'black bin' waste remains. Much of this waste goes to landfill, however, there is an efficient and flexible alternative. Waste-to-Energy, a real alternative to disposal, brings added choice to the Irish market.

Indaver

Indaver is one of Europe's leading waste management companies, providing high-quality, sustainable and cost-effective solutions. We have had a presence in Ireland for over thirty years and our commitment to the Irish market is a long-term one.

Meath

Indaver's Meath Waste-to-Energy facility, located just off the M1 near Duleek, is the first of its kind in Ireland, designed and constructed to process circa 200,000 tonnes of residual waste a year. Meath Waste-to-Energy generates 18MW of electricity for export, enough to supply more than 20,000 homes.

Meath Waste-to-Energy is helping Ireland to meet national and EU environmental obligations. It is also helping to meet renewable energy targets and improve energy security thereby improving the economy.

So what's in it for you?

Certainty

With Indaver, you know where you stand. In a time of much uncertainty in the waste management industry, Meath Waste-to-Energy is reality. Here. Now.

Choice

Until now, landfill was the only game in town for residual waste. But landfill is becoming more and more restricted. Meath Waste-to-Energy does not have these restrictions. This makes Meath Waste-to-Energy a real option for your waste treatment needs. Now. And for the future.

Flexibility

Meath Waste-to-Energy is flexible in the types of waste we can accept. We can directly accept all municipal 'black bin' waste including all of the biodegradable fraction that is being progressively banned from landfill.

Indaver, leading the field in sustainable waste management.

So what's in it for you? *continued...*

Economy

Meath Waste-to-Energy is a cost effective alternative for the treatment of your residual waste in the long term. We have made the investment in waste infrastructure that Ireland needs. You can benefit from our investment.

Seals of approval

The Environmental Protection Agency (EPA), Meath County Council and An Bord Pleanála have fully approved the Meath Waste-to-Energy facility.

The future

There are already over 450 waste-to-energy plants operating in the EU converting millions of tonnes of waste into energy. We are bringing the benefits of waste-to-energy to Ireland and to the Irish waste management industry.

We work together

We would like to become your long-term partner in waste management. We can offer you a sustainable treatment option for your residual waste. We do not collect, we treat and recover. So we can work together.

Key benefits to waste collectors

- The secure destruction of waste during the incineration process
- More flexibility than other residual waste treatment options
- No limitations on acceptance of BMW waste
- Suitable for all types of waste collection vehicles
- Clean and efficient discharge area
