

**Meath
Waste-to-Energy**

Pharmaceutical and Chemical Waste

.....

**Here's why
we'll make
great
partners
for **your**
business.**

.....

Ireland has a new option for the safe, efficient and sustainable treatment of **pharmaceutical & chemical waste**. Waste-to-Energy, a real alternative to export for disposal, brings added choice to the Irish market.

Indaver – Solid and Reliable Partners

Indaver is one of Europe's leading waste management companies, providing high-quality, sustainable and cost-effective solutions. We have had a presence in Ireland for over thirty years and our commitment to the Irish market is a long-term one.

Meath – Sustainable and Efficient Waste Management

Indaver's Meath Waste-to-Energy facility, located just off the M1 near Duleek, is the first of its kind in Ireland, designed and constructed to recover energy from circa 200,000 tonnes of residual waste a year.

So what's in it for you?

Environmentally Sound

Indaver is the only company in Ireland with a large scale waste-to-energy facility. This means there is less environmental risk in transporting waste. The waste is treated in a low-carbon and energy efficient way.

Customised service

Many waste streams from this industry require specific treatment – Meath Waste-to-Energy is able to respond to these requirements with a customised response and transparent reporting for each type.

Hazardous waste experts

We are specialists when it comes to hazardous waste both in Ireland and across Europe. We are clear on your needs and how we can facilitate your requirements.

Pharmaceutical and Chemical Waste

Indaver, leading the field in Pharmaceutical and Chemical Waste

So what's in it for you? *continued...*

Safety and security

Waste-to-energy is the most suitable form of waste disposal for many products and materials. Not only do we destroy your waste, we can provide documentation to prove this – or you can monitor this destruction personally if you wish.

Recovery - not disposal

The Meath Waste-to-Energy will also generate 18MW of electricity for export per year - enough to supply more than 20,000 homes – it is classified as 'recovery' rather than 'disposal', helping you to meet your corporate environmental targets. You will receive a certificate of recovery for all waste sent to Meath Waste-to-Energy.

Key benefits to industrial companies:

- Local and sustainable option for hazardous waste treatment
- Customised response to your waste needs
- Added value in terms of e-services such as invoicing and e-reporting
- Recovery certificates issued promptly
